## Testing mobile applications and web-based projects, Telecom

We tested a solution developed to capitalize on wireless penetration. It provides under banked people with the power to save and borrow, send money securely, simply by using prepaid cards on mobile phones.

Optimizing the software documentation.

Working with the handset simulators.

Testing compliance with financial standards and delicate workflows, such as money transfer.

Testing the communication between the various web applications and the handheld device.

### **Technology:**

Microsoft Windows XP

Sprint mobile phone simulators

.NET Framework 2.0

Bugzilla

Test Link

### **Dates:**

Aug 2009 to June 2009

**Project size: 24 man-months**

### **The Challenge**

- Successful start-up through online and mobile product launch ensured by quality testing services;
- Reduced production costs - optimum allocation of resources for QA and R&D, with a strong offshore component;
- Good communication skills - the Codea team was instrumental in communicating with all parties: the client, the onsite teams in Texas and the different offshore groups in Eastern Europe.
